

IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF ILLINOIS
EASTERN DIVISION

UBIQUITI NETWORKS, INC.,

Plaintiff,

v.

CAMBIUM NETWORKS, INC.;
CAMBIUM NETWORKS, LTD.;
BLIP NETWORKS, LLC;
WINNCOM TECHNOLOGIES, INC.;
SAKID AHMED; and DMITRY
MOISEEV.

Defendants.

Civil Action No.: 1:18-cv-05369

JURY TRIAL DEMANDED

**DECLARATION OF JEFF FISCHER IN SUPPORT OF
DEFENDANTS' MOTION TO DISMISS THE FIRST AMENDED COMPLAINT**

I, Jeff Fischer, declare and state as follows:

1. My name is Jeff Fischer. I have prepared this Declaration as an expert retained by Defendants Cambium Networks, Inc. ("Cambium") and Cambium Networks, Ltd. ("Cambium UK"), Blip Networks, LLC, Winncom Technologies, Inc., Sakid Ahmed, and Dmitry Moiseev (collectively the "Defendants"). I have personal knowledge of the facts set forth in this declaration and, if called to testify as a witness, could and would testify to the following under oath.

Qualifications:

2. I am a consultant and expert witness in the field of electrical engineering with a specialty in wireless communications. Attached to this Declaration as Exhibit H is a true and correct copy of my current CV, which describes my education, patents and publications,

employment and research history, and professional activities and awards. My billing rate for my services in this matter are \$300 per hour.

3. My educational background includes receiving a Master of Engineering degree in Electrical engineering from Cornell University in 1980, and a Bachelor of Science degree in Electrical engineering from Cornell University in 1979.

4. I have been an Electrical engineer working in the wireless communications field for 40 years. I perform product design work of wireless systems for wireless communication products. I design wireless hardware, software, low-level firmware, algorithms, and entire wireless system architectures. My work often includes system analysis and system engineering.

5. I was a staff member at MIT Lincoln Laboratory in the Analog Device Technology Group for 6 years between 1980 and 1986. Lincoln Laboratory is a federally funded research and development center administered by the Massachusetts Institute of Technology, with specialties in advanced radio communications. I spent the next 14 years at MICRILOR developing high performance, low cost radio modems and networks, as well as other technology for communications. In 1994, we developed and received a patent on, a packet radio for transmitting 10 Mbps within the FCC direct sequence spread spectrum regulations that had a wired backbone interface and operated at 2.4 GHz. In 1997, MICRILOR presented the technique in a proposal to the IEEE 802.11 working groups for “Higher Speed PHY Extension” in the 2.4 GHz Band as well as the 5 GHz band. The techniques in the MICRILOR proposal, of which I am co-inventor, evolved into what is today the IEEE 802.11b standard, part of what is commonly referred to as Wi-Fi, and incorporated into billions of chips/year.

6. MICRILOR was purchased by Proxim, Inc., a publicly traded wireless company, and I continued to work on wireless products at Proxim for the next 3 years until 2003. Subsequently, I consulted on several wireless router design projects.

7. In 2004, I helped start a company which quickly became the leader in Radio Frequency Identification (RFID) infrastructure. From 2004 to 2007 I served as the technical co-chair of the standards body working group that developed a new international standard for RFID that is still the standard in use today. I also served on committees to create various compatibility and regulatory standards worldwide. During this period I had substantial exposure to intellectual property issues.

8. In recent years I have been a technical consultant to over a dozen companies. Some examples of that work include developing product design plans for in-home wireless sensor networks, running the wireless group for a Wi-Fi based wireless speaker company, designing hardware, firmware, and systems operation for a Linux-based backhaul radio for LTE cellular systems, and writing the software for an embedded sensor system.

9. I am the inventor or co-inventor on more than 12 patents, which relate to technologies such as high speed wireless network communications, radio frequency identification systems, and underwater communications. I have been engaged as an expert or expert witness on more than 35 intellectual property cases.

10. In light of the foregoing, I consider myself to be an expert in the field of wireless communications and evaluation of the embedded software.

Scope of Work and Materials Relied Upon:

11. I have been requested by counsel for Defendants to perform a fairly straightforward task of tracing any software file, component or item identified in the Ubiquiti

First Amended Complaint (“FAC”) at paragraphs 37, 39 and 137 to any open source or GPL archived file, component or item which was at any time on the www.ubnt.com website. I was to determine whether the software files, components or items named in those paragraphs were either identically found as GPL or open source files on the www.ubnt.com site or if a substantially similar file, component or item existed as a GPL or open source file. The summary of my findings are attached herewith as Exhibit D. The statements made in Exhibit D including the last column are made by me under oath the same as this declaration.

12. In performing this task, I obtained or was provided the following:
 1. Ubiquiti FAC and all attached exhibits;
 2. Ubiquiti GPL Archive as of September 2018 downloaded by counsel and displaying the file path of “GPL.UBNT.v6.1.7”;
 3. Ubiquiti SDK for Ubiquiti’s AirOS operating system—AirOS 5.3 (SDK.UBNT.v5.3.tar.bz2); AirOS 5.3.3 (SDK.UBNT.v5.3.3.tar.bz2); and AirOS 5.5 (SDK.UBNT.v5.5.tar.bz2) (collectively the “Ubiquiti SDK’s”);
 4. Screenshots of archived and current versions of the Ubiquiti downloads website; and
 5. File and folder lists of the items in The Ubiquiti GPL Archive and Ubiquiti SDK’s.

Detailed Statements of Opinions and Findings:

13. I have obtained source code packages initially released by Ubiquiti as Software Development Kits (“SDK”) corresponding to three versions of Ubiquiti’s AirOS operating system—AirOS 5.3 (SDK.UBNT.v5.3.tar.bz2); AirOS 5.3.3 (SDK.UBNT.v5.3.3.tar.bz2); and AirOS 5.5 (SDK.UBNT.v5.5.tar.bz2) (collectively the

“Ubiquiti SDK’s”). Although I obtained the SDK files from a third party site (<http://stud.netgroup.uniroma2.it/~saverio/>), I believe that these files are republished from the Ubiquiti site and were available on the Ubiquiti site as described below but have since been removed. A .tar file is a compressed file format that contains many more files. An SDK is a collection of software used for developing applications for a specific device or operating system. The Ubiquiti SDK’s include tens of thousands of files of code. The Ubiquiti SDK’s each include instructions for compiling the SDK code. A listing of all SDK files which I have are attached as Exhibit F to my declaration. The compiled Ubiquiti SDK’s can then be used by customers to develop add-on applications and other customizations to AirOS and the devices it runs on.

14. I have also obtained another set of code packages released by Ubiquiti called a GPL Archive. The versions of the GPL Archive I have obtained correspond to AirOS versions 5.3.3 and 6.1.7 (collectively the “Ubiquiti GPL Archives”) as indicated by the directory names of those packages. I obtained the version 5.3.3 Ubiquiti GPL Archive directly from the Ubiquiti website at the following link: <http://ubnt.com/downloads/firmwares/XN-fw/v5.3.3/GPL.UBNT.v5.3.3.tar.bz2>. The version 6.1.7 Ubiquiti GPL Archive was sent to me by attorneys for the Defendants, who told me that they retrieved it from the Ubiquiti website in September 2018. Collectively, the Ubiquiti GPL Archive and the Ubiquiti SDK’s are referred together as the “Ubiquiti Open Source Archive.”

15. I have also reviewed archived versions of Ubiquiti’s website (“ubnt.com”) and understand that Ubiquiti published the Ubiquiti SDK’s on its website between 2009 and 2013, starting at the url “ubnt.com/support/downloads” and then migrating to the url “ubnt.com/downloads”. It appears that Ubiquiti stopped publishing its SDK sometime in 2013 and instead made its SDK available only upon request. As of the date of this declaration, the

Ubiquiti SDK's are no longer freely available on the Ubiquiti website. After removing the Ubiquiti SDK's from the general "downloads" page, Ubiquiti published a link to the "GPL Archive" on these same webpages (i.e., URLs).

16. I have attached as Exhibit A to my Declaration a printout of Ubiquiti's "downloads" page retrieved from the Internet Archive that is dated February 3, 2011. I note that the webpage acknowledges that Ubiquiti's firmware includes software licensed under the "GNU General Public License" and states that "[y]ou can find the complete and corresponding source in our SDK." The text "GNU General Public License" contains an embedded hyperlink and, when clicked, directs the user's browser to the text of the GNU General Public License version 3 ("GPLv.3"). This applies to all versions of the SDK offered by Ubiquiti.

17. I have attached as Exhibit C to my Declaration an example printout of Ubiquiti's download page retrieved in September 2018. The webpage includes the same acknowledgment that Ubiquiti's firmware includes software licensed under the "GNU General Public License" and states that "[y]ou can find the complete and corresponding source in the GPL archive." The text "GNU General Public License" again contains an embedded hyperlink and, when clicked, directs the user's browser to the text of the GPLv.3.

18. These webpages would have indicated to a person downloading the Ubiquiti Open Source Archives that the files provided at the download link were licensed under the terms of the GPLv.3 as open source or public software subject to the GNU General Public License licensing program. There are no other license terms listed anywhere on these webpages. I have also reviewed the "Release Notes" that are available for download on the same webpages. I have attached one example of those as Exhibit B to my Declaration. I note that the Release Notes do not indicate that any license other than the GPLv.3 applies to the Ubiquiti SDK's.

19. I have also reviewed more recent internet archives of Ubiquiti's downloads page. I note that sometime between December 2018 and February 2019, Ubiquiti modified its website to "hide" the GPL Archive download link behind a "click-wrap" license agreement that requires users to accept Ubiquiti's End-User License Agreement before downloading the latest GPL Archive. I did not click through to accept the agreement. I find it contradictory to the terms of the GPL to require agreement to a proprietary license in order to download open source code that must be distributed without restriction under the terms of the GPL.

20. It is my understanding that derivative works of GPL code are considered open source under the GPL. I have reviewed the contents of each of the Ubiquiti SDK's and the Ubiquiti GPL Archives. I note that each SDK includes a prominent notice in the "LICENSE" file of the top-level source code directory that indicates there are contents of the SDK package licensed under the GNU General Public License version 2 ("GPLv.2"). All of the code files in each SDK are under a directory labeled "openwrt" which indicates it is the GPL open source wireless router software. It is customary that a software developer would indicate that a particular license applies to all source code files by referencing the license file in the header of each source file (although this discipline is not always followed). The OpenWrt.org license webpage states "If not otherwise stated in the source files, the OpenWrt build environment is provided under the terms of the GNU General Public License Version 2. The exact GPLv2 license text can be found in the file LICENSE in the source repository." I view this as meaning unless otherwise indicated a file without an alternative license header in OpenWrt must be governed by the GPL license. Furthermore, it is not sufficient to state an alternative license in a file header; it must also stand the test of not being a derivative work. It is common to add a

Copyright statement to any source code, whether it is proprietary or open-source license. Standard notice of “Copyright Ubiquiti – all rights reserved”, with no further license claim is not sufficient to indicate there may be an override of the GPL license in the way the file is coded. For example, in one of the accused directories, the following header appears in one of the files (SDK.UBNT.v5.3\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\makefile) indicating Ubiquiti has declared both an explicit copyright and accepted that the code is clearly a derivative work.

```
# Copyright (C) 2007 Ubiquiti Networks, Inc.  
#  
# This is free software, licensed under the GNU General Public License v2.  
# See /LICENSE for more information.
```

21. I did not identify any other license terms in the Ubiquiti SDK packages that would indicate they would override the prominent notice regarding the application of the GPL. I have also identified numerous “LICENSE” and “readme.txt” files in the Ubiquiti GPL Archives that contain the same notice regarding the GPL. For example, the “readme.txt” in the top-level directory of the Ubiquiti GPL Archive states “What is GPL archive? . . . It contains all GPL related sources and modifications made by Ubiquiti Networks on original OpenWRT-r18801 sources.”

22. Generally, an SDK will typically include the source code or libraries for the program that it intends to enable developers to interact with such as a hardware device or software platform. For example, both of the major smartphone operating system vendors provide SDK’s. I have reviewed the general architecture of the Ubiquiti SDK’s. I observed and believe that the Ubiquiti Open Source Archives are based on the open source projects U-Boot and OpenWRT, which are both licensed under the GPL. The projects collectively comprise tens of thousands of individual files and millions of lines of open source code. A listing of these files as

they appear in the Ubiquiti Open Source Archives is attached as Exhibits F (Ubiquiti SDK) and G (Ubiquiti GPL Archive) to my declaration. All of these files came from the Ubiquiti website originally and were offered by Ubiquiti to promote users to develop software for their hardware platform.

23. I understand that Ubiquiti has asserted infringement of and breach of proprietary license restrictions on the following files or software components identified in Ubiquiti's First Amended Complaint ("FAC") at paragraphs 37, 38 and 137andre:

1. ubnt-web;
2. ubnt-cgi;
3. ubnt-poll;
4. ubnt-spectral;
5. ubnt-spectral-2;
6. ubnt-regd,
7. ubntbox,
8. ubntconf_cl.sh;
9. ubnt-3g;
10. bunt-base-files;
11. ubnt-poe-control;
12. ubnt-hal; and
13. five "u-boot.rom" files.

24. It is my opinion that the source or object code for all of these components, or for substantial parts of these components, is included in Ubiquiti's Open Source Archives, which, as discussed above, clearly indicate that they are licensed under the terms of the GPL.

25. I have attached to this Declaration a table summarizing my findings as Exhibit D. Specifically, I identified what appears to be the complete corresponding code files that directly match the following components:

1. ubnt-web;
2. ubnt-cgi;
3. ubnt-poll;
4. ubnt-spectral;
5. ubnt-spectral-2;
6. ubnt-regd,
7. ubntbox,
8. ubntconf_cl.sh;
9. ubnt-3g; and
10. bunt-base-files.

26. I determined that the corresponding code is included based on code files and directory structures that match exactly the component names and functionality briefly described in the FAC.

27. Specifically, the **ubnt-web** component matches the **ubnt-web** folder in the main “package” directory of the SDK. The ubnt-web folder includes 318 code files and 13 folders. The code files contain the source code for the “ubnt-web” package. The files in these component folders do not contain any license that would override the GPL. I found similar matching files and folders for the other components as identified in Exhibit D. It is my opinion that Ubiquiti has released these components under the GPL and that they are subject to the GPL.

28. The **ubnt-cgi** component matches the **ubnt.cgi** file in the “ubnt-web\src” directory of the SDK. The ubnt-web\src directory contains 60 “.cgi” files, which are “Common Gateway Interface” scripts that are executed by a web server to dynamically create webpage code. The “src” directory also contains css internet stylesheets and javascript code. Taken together, the contents of this directory appear to be the web user interface for Ubiquiti products. The ubnt.cgi file contains source code that corresponds to at least one component of Ubiquiti’s web user interface. The folder that contains this component does not contain any license that would override the GPL.

29. The **ubnt-poll** component matches the 50-**ubnt-poll** file and **ubnt_poll.ko** file in the ubnt-base-files directory. The ubnt_poll.ko file is an object code file that appears to provide polling functionality. I understand the GPL applies to an object code file in the same manner it applies to a source code file. The folder that contains this component does not contain any license that would override the GPL.

30. The **ubnt-spectral** and **ubnt-spectral-2** components match the **ubnt_spectral.ko** file, and various other “spectral” files (spectraltool, spectralbox, spectralplayer, spectralserver) in a sub-folder of the ubnt-base-files directory. The folder that contains these components do not contain any license that would override the GPL.

31. The **ubntbox** component matches the **ubntbox** file in a sub-folder of the ubnt-base-files folder. The folder that contains this component does not contain any license that would override the GPL.

32. The **ubntconf_cl.sh** component matches the **ubntconf** file in a sub-folder of the ubnt-base-files folder. The folder that contains this component does not contain any license that would override the GPL.

33. The **ubnt-3g** component matches the **30-3g** component in a sub-folder of the **ubnt-base-files** folder. The files in these component folders do not contain any license that would override the GPL.

34. I believe the component identified in the FAC as **bunt-base-files** to refer to the **ubnt-base-files** package located in the package folder of the Ubiquiti Open Source Archive. The **ubnt-base-files** folder contains 125 files and 18 sub-folders. The files in these component folders do not contain any license that would override the GPL.

35. Similarly, I identified what appears to be corresponding source code files for the five “u-boot.rom” files in Ubiquiti’s GPL Archive. I determined that the corresponding code is included based on code files and directory structures that match the component names and functionality described regarding the “u-boot.rom” files.

36. For example, regarding the **ar7240-u-boot.rom** file, I determined that “ar7240” refers to a processor and controller chip produced by Atheros that is used in Ubiquiti’s devices. I also determined that “u-boot” refers to the open source u-boot bootloader based on the description of the module as containing “modifications to the bootloader for AirOS provided by Atheros.” FAC ¶37. Understanding this, I reviewed the Ubiquiti GPL Archives and identified a folder within the “uboot” directory structure titled “ar7240.” The full path to this folder is **GPL.UBNT.v6.1.7\uboot\uboot-xm\board\ar7240**. The “ar7240” folder contains 53 code files. It is my opinion that these code files contain the source code for the **ar7240-u-boot.rom** file. Similar folders containing source code correspond to the other u-boot.rom files.

37. Regarding the **ubntxn-u-boot.rom** file, I understand that Ubiquiti makes three types of boards for its M-Series devices that run Air-OS which are referred to as “xm”, “xw”, and “ti”. It is my opinion that the “xn” in this file name is a typo and actually refers to the

“xm” line. However, even if this file is not a typo, and indeed does refer to a Ubiquiti “xn” series of boards, it is extremely unlikely that the code for that board would not also be considered a derivative of the GPL U-Boot bootloader code that Ubiquiti has published the other bootloader files under and therefore admitted that they are covered by the GPL. This is because given the name “u-boot” in the file name, it is likely that this file also is derived from U-Boot as the other files are. I also found no claim by Ubiquiti in the source code that they assert that they have licensable rights. I reserve the right to revise this opinion should a different understanding come to light. It is my opinion that the “ubnt” in the file name refers to Ubiquiti Networks. Regarding this “ubntxn-u-boot.rom” file, it is my opinion that the files in the GPL.UBNT.v6.1.7\uboot\uboot-xm\ directory contain the source code for this file.

38. Regarding the ubntxn-400-u-boot.rom file, I understand this file also to refer to the UBNT “xm” line of products for the same reasons set forth above. It is my opinion that files in the GPL.UBNT.v6.1.7\uboot\uboot-xm\ folder also correspond to this bootloader file. Regarding the ubntwasp-u-boot.rom file, it is my opinion that the files in the GPL.UBNT.v6.1.7\uboot\uboot-ti\board\ar7240\ubnt-wasp directory correspond to this bootloader file. And regarding the ubnttitanium-u-boot.rom file, it is my opinion that the files in the GPL.UBNT.v6.1.7\uboot\uboot-ti\board\ directory contain the source code for this file.

39. It is my opinion that Ubiquiti has released all of these u-boot bootloader files under the GPL and that they are subject to the GPL.

40. I have also reviewed the Ubiquiti GPL Archive and SDK’s for references to the remaining components ubnthal, ubnt-regd, and ubnt-poe-control in the context of their descriptions in the FAC. I understand that the FAC states that the ubnthal is part of the AirMAX radio protocol and wireless drivers. It is my opinion that, based on the limited description

Ubiquiti provided regarding this component, that ubnthal refers to a hardware abstraction layer component (HAL). It is my opinion that the file SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\lib\modules\2.6.15-5.2\ath_hal.ko contains the object code for this component because the title indicates that it is a HAL file for an Atheros chip. The location of this file in the “ubnt-base-files” folder indicates that it is likely the ubnthal component that Ubiquiti asserts.

41. I understand that the FAC states that ubnt-regd is part of the AirMAX radio protocol and wireless drivers. It is my opinion that, based on the limited description in the FAC, this component refers to a database of regulatory requirements that contains information such as FCC grants, ETSI limited frequencies, maximum transmit power, etc. It is my opinion that the file SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\sbin\regdomain contains the object code for this component because it is a Regulatory Domain (regd) file in the “ubnt-base-files” folder.

42. I further understand that the FAC states that the ubnt-poe-control refers to “power over ethernet”. It is my opinion that, based on the limited description in the FAC, this component refers to a “control” for power over ethernet settings. It is therefore my opinion that the files SDK.UBNT.v5.5\SDK.UBNT.v5.5\openwrt\package\ubnt-web\src\advanced.tmpl and \advanced.cgi contain the source code for this power over ethernet control. Specifically, the advanced.tmpl file contains the Ubiquiti user interface code that allows a user to set “Advanced Ethernet Settings” including settings related to Power over Ethernet, and specifically, the Power over Ethernet passthrough setting. It is therefore my opinion that these files correspond to the ubnt-poe-control component.

43. I have done global file searches in the asserted components of the Ubiquiti Open Source Archives and found no place where Ubiquiti lays claim to a license for any of the work in these files other than the GPL as prominently applied in the base directories.

44. I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

Executed at San Diego, CA this _10th__ day of July, 2019.

A handwritten signature in black ink, appearing to read 'JFischer', written in a cursive style.

Jeff Fischer

5 captures

19 Jan 2011 - 7 Aug 2011

- Auto ACK improvements
- Administrator password limit is 8 symbols
- Allow to increase Logout session timeout
- Allow to disable password authentication for SSH
- 5 MHz channel width is back in 2.4GHz mode
- GUI: AirMax made as separate section under Advanced setting menu
- Fixed GUI issue in AP Mode, Connections shows 0 when more then 45 clients are actually connected
- Fixed MAC expiration issue in Bridge-WDS
- Fixed passing VLAN tagged packets with V5.1-Beta
- Fixed CCQ value when no data
- Show B/G/N mixed instead of Ng, A/N mixed instead of Na
- Fixed Signal Level reporting in UI (RSSI chain mismatch)
- Fixed Data rates selection and reporting
- Fixed download backup configuration file or Support info file issue if using IE browser

Version 5.1-beta (November 20, 2009)

- New: 802.11 a/b/g products support
- New: WEP and WPA/WPA2 TKIP security support
- New: Advanced Ethernet settings
- New: Web server change
- New: AirMax 4 level MAC address based priority
- New: AirMax automatic Voice packet recognition and TXQ assignment
- New: AirMax No Ack (PtP Mode only). Can be enabled only in the config file for the AP by setting radio.1.pollingnoack=1
- New: auto ACK implementation
- Added Arpnat support for more than one IP address per single bridged MAC address
- Updated PPPoE version
- Ethernet driver update
- Added hardware watchdog timer
- Fixed stability issue on link when Airmax is disabled
- Fixed PPPoE Stability in 40 MHz channel width (PPPoE session disconnects due to the no response to 5 echo-requests)
- Fixed WPA/WPA2 client connection issue to AP
- Removed US country code DFS frequencies: 5500-5700 GHz
- Separated L2 isolation and multicast traffic
- Fixed issues in PPPoE daemon when compression enabled
- Fixed switch off for Extra reporting (MT discovery protocol)
- Fixed incorrect CDP packet check sum
- No more FTP speed limits per session when AirMax enabled
- Fixed Compliance test country frequency range for 20/40 MHz channel width
- Fixed SNMP OID numbers persistence (SNMP daemon enumerates all interfaces on startup and assigns sequential numbers now)
- Fixed Web UI lock
- Fixed read-only user account
- Improved signal strength value in 40 MHz channel width
- Fixed signal strength per chain handling when station disconnects from AP
- Fixed data rates reporting for 10Mhz channel width for 802.11 a/b/g clients
- Improved Noise Floor reporting
- Improvement in data rate reporting when traffic is inactive
- Added Device Name in Station and AP statistics table
- Fixed ARP table entry reporting if it contains unresolved MAC address

Version 5.0.2 - SERVICE release (October 23, 2009)

EXHIBIT D

EXHIBIT D**SUMMARY OF FINDINGS FROM INSPECTING THE UBIQUITI OPEN SOURCE ARCHIVES**

No.	Package Name	Direct Match in UBNT GPL Files?	Path to Corresponding Source Code for Package in Ubiquiti's GPL SDK or GPL Archive	Ubiquiti Allegation	Expert Statement as to Location Found
1	ubnt-web	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-web	Ubiquiti alleges this component is part of its Registered Firmware as included in the "web user interface". FAC ¶37.	I found the source code for this component in the AirOS 5.3 and 5.5 SDK's with no alternative separable license, published by Ubiquiti under the terms of the GPL.
2	ubnt-cgi	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-web\src\ubnt.cgi	Ubiquiti alleges this component is part of its Registered Firmware as included in the "web user interface". FAC ¶37.	I found the source code for this component in the AirOS 5.3 and 5.5 SDK's with no alternative separable license, published by Ubiquiti under the terms of the GPL.
3	ubnt-poll	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\etc\modules.d\50-ubnt-poll Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\lib\modules\2.6.15-5.2\ubnt_poll.ko	Ubiquiti alleges this component is part of its Registered Firmware as included in "polling". FAC ¶37.	I found the object code for this component in the AirOS 5.3 and 5.5 SDK's with no alternative separable license, published by Ubiquiti under the terms of the GPL.

4	ubnt-spectral	YES	<p>Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\lib\modules\2.6.15-5.2\ubnt_spectral.ko</p> <p>Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\bin\spectraltool</p> <ul style="list-style-type: none"> - \spectralbox - \spectralplayer - \spectralserver 	Ubiquiti alleges this component is part of its Registered Firmware as included in the “spectral analysis module”. FAC ¶37.	I found the object code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
5	ubnt-spectral-2		Same as “ubnt_spectral”	Ubiquiti alleges this component is part of its Registered Firmware as included in the “spectral analysis module”. FAC ¶37.	I found the object code for the ubnt-spectral component published under the GPL and it is likely that the spectral-2 component is derivative of that code with no alternative separable license, published by Ubiquiti under the terms of the GPL.
6	ubntbox	YES	<p>Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\sbin\ubntbox</p>	Ubiquiti alleges this component is part of its Registered Firmware as included in “configuration” and “utilities”. FAC ¶37.	I found the object code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.

7	ubntconf_cl.sh	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\sbin\ubntconf	Ubiquiti alleges this component is part of its Registered Firmware as included in “configuration”. FAC ¶37.	I found the object code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
8	ubnt-3g	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.5\openwrt\package\ubnt-base-files\files\usr\etc\hotplug.d\usb\30-3g - 3g file in “ubnt-base-files” package	Ubiquiti alleges this component is part of its Registered Firmware as included in “utilities”. FAC ¶37.	I found the source code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
9	bunt-base-files	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files ¹	Ubiquiti alleges this component is part of its Registered Firmware as included in “base files”. FAC ¶37.	I found the source code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.

¹ It is assumed the “bunt-base-files” is a typo and is intended to refer to “ubnt-base-files.”

10	ar7240-u-boot.rom	YES	Ubiquiti Open Source Archive\GPL.UBNT.v6.1.7\uboot\uboot-xm\board\ar7240\ubnt-xm	<p>Ubiquiti alleges this component is part of its Registered Firmware as “modifications to the bootloader for AirOS provided by Atheros”. FAC ¶37.</p> <p>Ubiquiti also alleges that this component is “licensed-in materials, not subject to the GPL or any other open-source license. FAC ¶39.</p>	I found the source code for this component in the Ubiquiti GPL archive that explicitly identifies components licensed by Ubiquiti under the terms of the GPL with no alternative separable license, published by Ubiquiti under the terms of the GPL.
11	ubntxn-u-boot.rom	YES	Ubiquiti Open Source Archive\GPL.UBNT.v6.1.7\uboot\uboot-xm\board	<p>Ubiquiti alleges this component is part of its Registered Firmware as “modifications to the bootloader for AirOS provided by Atheros”. FAC ¶37.</p> <p>Ubiquiti also alleges that this component is “licensed-in materials, not subject to the GPL or any other open-source license. FAC ¶39.</p>	I found the source code for this component in the Ubiquiti GPL archive that explicitly identifies components licensed by Ubiquiti under the terms of the GPL with no alternative separable license, published by Ubiquiti under the terms of the GPL.

12	ubntxn-400-u-boot.rom	YES	Ubiquiti Open Source Archive\GPL.UBNT.v6.1.7\uboot\uboot-xm\board	<p>Ubiquiti alleges this component is part of its Registered Firmware as “modifications to the bootloader for AirOS provided by Atheros”. FAC ¶37.</p> <p>Ubiquiti also alleges that this component is “licensed-in materials, not subject to the GPL or any other open-source license. FAC ¶39.</p>	I found the source code for this component in the Ubiquiti GPL archive that explicitly identifies components licensed by Ubiquiti under the terms of the GPL with no alternative separable license, published by Ubiquiti under the terms of the GPL.
13	ubntwasp-u-boot.rom	YES	Ubiquiti Open Source Archive\GPL.UBNT.v6.1.7\uboot\uboot-ti\board\ar7240\ubnt-wasp	<p>Ubiquiti alleges this component is part of its Registered Firmware as “modifications to the bootloader for AirOS provided by Atheros”. FAC ¶37.</p> <p>Ubiquiti also alleges that this component is “licensed-in materials, not subject to the GPL or any other open-source license. FAC ¶39.</p>	I found the source code for this component in the Ubiquiti GPL archive that explicitly identifies components licensed by Ubiquiti under the terms of the GPL with no alternative separable license, published by Ubiquiti under the terms of the GPL.

14	ubnttitanium-u-boot.rom	YES	Ubiquiti Open Source Archive\GPL.UBNT.v6.1.7\uboot\uboot-ti\board	Ubiquiti alleges this component is part of its Registered Firmware as “modifications to the bootloader for AirOS provided by Atheros”. FAC ¶37. Ubiquiti also alleges that this component is “licensed-in materials, not subject to the GPL or any other open-source license. FAC ¶39.	I found the source code for this component in the Ubiquiti GPL archive that explicitly identifies components licensed by Ubiquiti under the terms of the GPL with no alternative separable license, published by Ubiquiti under the terms of the GPL.
15	Atheros-11n	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\etc\modules.d\55-ath-11n	Ubiquiti alleges this component is part of its Proprietary Firmware as “licensed-in materials, not subject to the GPL or any other open-source license”. FAC ¶39.	I found the source code for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
16	“proprietary compilations of data contained in its calibration and configuration files.”	YES	Ubiquiti Open Source Archive\SDK.UBNT.v5.5\openwrt\package\ubnt-web\src\lib\settings.inc - This is only one example, numerous other settings, calibration files, and configuration files are provided	Ubiquiti alleges that these data compilations are part of its “Proprietary Firmware.” FAC ¶39.	I found the data for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.

17	ubnthal	Likely Match	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\lib\modules\2.6.15-5.2\ath_hal.ko - UBNT hardware abstraction layer (HAL) file for Atheros chip in “UBNT-Base-Files” folder	Ubiquiti alleges this component is part of its Registered Firmware as included in the AirMAX radio protocol and wireless drivers. FAC ¶37.	I found the object code file for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
18	ubnt-regd	Likely Match	Ubiquiti Open Source Archive\SDK.UBNT.v5.3\openwrt\package\ubnt-base-files\files\sbin\regdomain - Regulatory domain (regd) file in “UBNT-Base-Files” folder	Ubiquiti alleges this component is part of its Registered Firmware as included in the AirMAX radio protocol and wireless drivers; Ubiquiti also alleges this component is related to “configuration.” FAC ¶37.	I found the object code file for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.
19	ubnt-poe-control	Likely Match	Ubiquiti Open Source Archive\SDK.UBNT.v5.5\openwrt\package\ubnt-web\src\advanced.tmpl SDK.UBNT.v5.5\SDK.UBNT.v5.5\openwrt\package\ubnt-web\src\advanced.cgi - Code for web control for Power Over Ethernet (POE) in “Advanced Ethernet Settings”	Ubiquiti alleges this component is part of its Registered Firmware as included in “power over Ethernet”. FAC ¶37.	I found source code files for this component in the AirOS 5.3 and 5.5 SDK’s with no alternative separable license, published by Ubiquiti under the terms of the GPL.

Downloads

To download your device's firmware, first select the device's category, followed by its name, and then choose from the list of available firmware.

Product: AirMax ISP Solutions Model: AirGrid M2 Available Firmware: v5.3 v5.2.1 v5.2 Download

Extra Information for AirGrid M2 v5.3

Firmware size: 6.52MBytes
Firmware date: 1.14.11
Firmware build: 7782
Firmware MD5 sum: 8905611eb72bae5ccfa9aaaa6a28b32e
Release notes: Download
SDK toolchain: Available in SDK
SDK: Download , size: 131.77MBytes

Some of the software in the firmware is licensed under the GNU General Public License and other Open Source and Free Software licenses. You can find the complete and corresponding source in our SDK.

Jeff.Fischer@ieee.org

Profile

Hands-on consulting in wireless product architecture, design, system analysis, simulation, system integration, hardware and firmware development, intellectual property, integration with engineering teams

Expert witness for patent infringement, invalidity, technical damages, alternative technologies, prior art, evidence of use, code review Software, hardware, Verilog, RTL, VHDL, claim charts, IPR declarations, technical contract disputes and licensing.

Technology areas include wireless data, voice and video, WLAN, WWAN, WiMax, Cellular, Wi-Fi including 802.11a/b/g, 802.11n, 802.11ac, 3G, 4G, LTE, interference management, MIMO, OFDM, SC-FDMA, Space-time processing, Single Carrier, SC-FDE, spatial multiplexing, beamforming, multi-user MIMO, ARQ, transmit precoding, antennas, modulations (QAM, FSK, PSK, PPM, PCM, etc.), and other narrowband and spread spectrum technologies (FH, DSSS, CDMA, UWB), FEC, interleaving, wireless sensor networks, RFID (passive, BAP, Active, UHF, HF, and NFC), RTLS and asset tracking.

Technical expertise spans analog, digital, and RF circuit and filter design, antenna design, complex modulation and demodulation, signal processing, microcontrollers, multiprocessing, firmware, digital interfaces, C, Verilog, RTL, HDL, air protocol and MAC design, wireless networking, security and authentication, asset tracking, real time location, multipath processing, signal processing, homologation, regulatory agency and standards issues.

Expert witness experience includes more than 35 cases split across plaintiff and defendant, IPRs, contract disputes, and licensing.

Key Career Work & Achievements

- ☐ Co-Patented foundation technology in 802.11b (used in over 800 Million WiFi chipsets sold/year)
- ☐ Co-chair of RFID EPC Gen2 Working Group; participated in harmonizing ISO 18000-6C standard with EPC Gen2; multiple industry and end user groups
- ☐ Developed industry leading multi-protocol WLAN, cellular backhaul and bridging products
- ☐ Products and systems designed and commercialized throughout vertical industries ranging from retail and manufacturing to healthcare to government and defense
- ☐ Six years at MIT Lincoln Lab developing high bandwidth signal processing for advanced packet radio networks, including RF, analog, digital, and microcontroller support circuits

Summary

Broad experience in electronic communications with major innovations and contributions to the wireless LAN, backhaul and RFID industries

- Consulted for over 15 companies in a variety of technologies
- Five years driving signal processing architecture and systems engineering for Fastback Networks
- Technical Advisor, Department of Electrical Engineering, Montana Tech of University of Montana

- Five years as Chief RF Architect at industry-leading Reva Systems developing scalable RFID systems
- IP development and analysis, over five years as an expert witness in more than 35 cases of patent and contract litigation
- Three years at Proxim, developing circuits and chips for industry leading multi-protocol WLAN and bridging products
- Fifteen years at MICRILOR during the inception of the Wireless LAN industry, developing multiple products and co-patenting technology that is the basis for the current 802.11b standard
- Six years at MIT Lincoln Lab developing high bandwidth signal processing for advanced packet radio networks

Range of work:

Worked on all forms of analog, digital, and RF hardware designs for communications systems and general circuits from baseband to 7 GHz operation and millimeter wave design issues. Designed antennas, developed innovative physical layer and MAC layer designs, worked on five ASICs, built microcontroller and microprocessor based systems, wrote firmware, modeled in MATLAB, did ASIC system engineering, designed RF channel probes for analyzing multipath, MIMO signal processing, millimeter wave systems, designed protocols, ran standards groups, worked with regulatory agencies, set up long range terrestrial radio installations, developed entire systems flow and worked closely with customers to solve process and implementation problems, generate sales, understand markets, help them through pilot programs to get to sales, and overcome technical hurdles to get to a sellable position.

Worked with the FCC, ETSI, IC, Anatel and MIC in developing rules for RFID, WLAN, Radar compatibility, and fixed radio operation.

Participated in 802.11 working groups, co-Chaired the RFID Gen2 working group, participated in several other groups including Data Protection, ISO 18000-6, Item Level tagging technology group, and was designated Referee in the EPC Global Item Level Tagging technology bakeoff among 200 companies.

Experience

Feb. 2009 - Present Independent Consultant, Boston, MA

Consulting:

- Patent litigation on 35 cases including 6 IPR
- HF data transfer, non-standard wireless links for audio, production environment for Wi-Fi based commercial products
- Matlab simulation of wireless sensor system
- Lead a systems team in developing the signal processing and control architecture an advanced backhaul radio.
- Lead a homologation group developing hitless DFS operation in unlicensed bands
- Printed-electronics tag design and applications
- Near-Field Communications tags and readers
- Optimizing an RFID installation for a DoD installation
- Authentication for RFID systems. Design of a highly-secure battery assisted passive RFID tag system
- Architecture of a 433 MHz active RFID link

- High performance design for an RF pulse generator for a DARPA contractor
- Development of a miniaturized long range communications link for networked video transmission in a small unmanned air vehicle system (SUAS)
- 802.11n consumer product, 3x3 MIMO including spatial multiplexing, diversity, and beam-forming; antenna design investigations and performance measurements in real environments
- Extensive circuit, software, and algorithm development on a long range MIMO product
- Cell phone front end RF-circuit
- Analysis of in-home technology approaches for wireless sensor systems for a major corporation

Patent Litigation:

Expert reports on infringement, invalidity rebuttal, claim declaration, IPR (declarations for petitioner, patent owner responses, and motion to amend), prior art research and analysis, claim charts, code review (C and RTL)

Worked for both plaintiff and defendant sides

Tore down hundreds of products and made field measurements on products for evidence of use

Code review of C and Verilog for many products and code bases

Wrote numerous analysis comparing alternative technologies

Worked closely with attorneys to develop technology understanding and formulate theories

Dec. 2003 - Feb. 2009 Reva Systems, Chelmsford, MA

Chief RF Architect

- As the second employee of Reva Systems, the leading RFID infrastructure company, I served as the Chief RF Architect for 5 years.
- Contributed to early stage technical value analysis of product positioning and helped develop company IP portfolio.
- Worked with customers to field pilots in manufacturing, distribution, retail sites, and asset management. Completed numerous successful deployments.
- Analyzed, implemented, and documented, RF and process techniques for aggregation and verification of goods using RFID, leading to customer successes.
- Built up an RF lab for evaluating partner RFID reader and tag products and performed numerous empirical studies on tag and reader performance to determine how to optimize operation specific to each reader brand.
- Designed methods to reduce interference among multiple readers, analyze location information, precisely control reader operation, and mine the data generated from fields of tags obtained by fixed readers, handhelds, and forklift readers.
- Created analysis and algorithms in MATLAB for planning RFID coverage, coordinating and combining data from multiple readers, locating tags, and isolating ambient tags from tags of interest; managed software team members in translating these into implementations in various embedded languages.
- **Standards and Regulatory Work**
 - Co-Chaired and contributed to the Gen2 Working Group for four years as well as several ad hoc groups and requirements committees in an effort to help the RFID industry take hold. Participated in parallel ISO work.
 - Worked with ETSI to create new RFID regulations in Europe and worked closely with the FCC to craft the 900 MHz RFID measurements required in the US that would allow mass deployment of RFID tags.

Oct. 2002 - Nov 2003 Independent Consultant / Chief Architect Boston, MA

- Drove RF and system architecture roadmap, product requirements, IP and business cases for two groups trying to form venture funded startups. Analyzed emerging capabilities in the industry, innovated leapfrog advances in these areas, and filed provisional patent applications. Presentations to venture capitalists and diligence teams.

Analyzed customer business models and worked on partner arrangements. Began investigation of RFID technology.

- Worked on varied problems in physical and MAC layers for customer's radio systems
- Architectural design and assistance in design of company products; and performance analysis of product concept in MATLAB.
- Technical diligence teams for technology or company acquisition including analysis of patent portfolios, MATLAB analysis of technical claims, regulatory agency diligence, and customer capability diligence.

Jan. 2000 – Oct. 2002 Proxim Corporation (Boston Design Center) Wakefield, MA

In January, 2000, MICRILOR, an internally funded company that Mr. Fischer was part owner of, was purchased by Proxim, inc., based in Sunnyvale, CA, and the MICRILOR team became the Boston Design Center for Proxim.

Systems Architect for Advanced Development Group Reporting to CTO

- Responsible for system design, RF chip analysis in MATLAB, and overall design issues involved in development of a 4 million gate, multi-protocol, baseband/MAC chip to do 802.11a/b/g/h/e/i and 802.16a, as well as proprietary modes.
- Responsible for the mixed signal section of the multi-protocol chip, and created novel schemes for reliable low-power detection of multiple incoming signals, a unique AGC method required for supporting the ultra-wide dynamic range, and uncovered significant performance issues with existing 802.11a detection methods.
- Worked with IP core vendors to define mixed-signal requirements, and with a major mixed-signal chip company to help define the converter requirements for future WLAN business.
- Made or influenced buy vs. build decisions.
- .

Technical Project Lead for the Stratum MP

- Designed the MAC protocol, digital board and firmware operation of the StratumMP, the highest throughput radio in the point-to-multipoint unlicensed class.
- Integrated SNMP, an http server, and an HTML interface for internet control of the Stratum MP radios.
- Interfaced with customers to understand their performance requirements as determined by actual applications (WISP, VOIP, etc.) and developed fine tuning adjustments to the MAC protocol to optimize performance.
- Established network testing to simulate customer situations. Pushed product through the field trials and production phase.
- Patent infringement support of cases based on the 802.11b technology patented while at MICRILOR resulting in over \$50MM of remuneration.

Oct. 1986 – Jan. 2000

MICRILOR

Wakefield, MA

MICRILOR was a small internally funded company formed by former MIT Lincoln Laboratory employees to work on RADAR, communications, and instrumentation problems. In 1994 MICRILOR teamed with a major Japanese company to develop the first 10 Mbps spread spectrum radio which was based on technology patented at MICRILOR, and which formed the basis for the 802.11b standard used in WiFi.

Senior Engineer and Technical Project Lead for Numerous Projects

- Drove the development of the first 10 Mbps wireless LAN product to pass FCC approval for unlicensed transmission. The \$6 Million product development was funded by a multi-billion dollar Japanese company that moved an engineering team to MICRILOR.
- Fundamental system definition, design of the signal processing and control logic, design and debug of the embedded firmware.

- ☐ Management of the firmware and hardware engineering team, and daily management and coordination of much of the program including budgeting, expenditures, development tool and equipment purchases.
- ☐ Designed and brought to production four chips using back-end support companies. Did much of the circuit design, Verilog synthesis, timing simulation, test vector generation, and qualification for these developments.
- ☐ Served as customer interface in the effort to bring the product to the OEM market.
- ☐ Co-patentee with Dr. John Cafarella on four patents relating to the 10 Mbps technology, which formed a basis for the now current 802.11b IEEE standard. These patents teach the combination of orthogonal signaling with direct-sequence spread-spectrum to achieve high data rates while maintaining the processing gain needed to combat multipath and interference in a practical deployment. They became very lucrative for Proxim and the techniques are still being used in the wireless industry.
- ☐ Worked with the technical branch of the FCC to help them converge on fundamental definitions and specifications needed for the emerging spread spectrum equipment.
- ☐ Member of working groups for IEEE 802.11a and 802.11b standards committee. Interfaced with many companies and promoted the MICRILOR modulation techniques. All 802.11b wireless LAN equipment made today is based upon this modulation technology.
- ☐ Developed a low-cost, high throughput multipoint network-radio bridge. This product achieved 9 Mbps throughput from a 10 Mbps payload rate radio network; a PHY and MAC efficiency that set a new benchmark in the unlicensed bands.
- ☐ Architecture, digital circuit design, FPGA design, ASIC circuit design, Verilog design, analog and RF circuit design, antenna and transducer design and impedance matching, protocol design and multi-processor firmware design and coding. Designed many phase-locked loop, AGC, and unique normalization and tracking loops. Designed numerous baseband, RF, and microwave filters. Designed channel probing tests to measure propagation and multipath characteristics. Noise figure and other RF measurements. Processing gain and performance measurements.
- ☐ Taken products from concept and tradeoff analysis, through design, prototyping, in-house testing, field trials, regulatory testing (national and international), production, packaging, and customer follow-up.
- ☐ Worked on a variety of military communications systems and signal-processing subsystems including an underwater spread-spectrum acoustic data link, a chirp-transform-based transceiver, RFID reader/tag system, and a superconducting-component satellite communications processor.
- ☐ Product architecture and circuit design for a variety of commercial product developments including a cordless telephone, early wireless LANs for AppleTalk, zero-net, and token ring. Simulated various performance capabilities and spread spectrum coding schemes in multipath, interference, and noise.
- ☐ Managed large circuit and product efforts including incoming test of components, qualifying components purchased outside, environmental and EMI testing and debugging. Managed product and circuit board design for numerous developments.
- ☐ Invented new modulation circuits including a digital generation of MPSK and a dense bits/Hz on-off-keying technique.
- ☐ Drove the development of a commercial 19.2 Kbps, high processing gain direct-sequence spread-spectrum, dual-processor software-based modem, with high multipath immunity.
- ☐ Conceived of, explored market, and designed, built and tested a line of low-cost FSK radio modules that were used for control, sensing, and telemetry. Created advertising, interfaced with customers, and provided applications support for this product line.
- ☐ Made low-cost commercial and industrial grade unlicensed RF devices, including message generators, encoders and repeaters using various modulation methods and RF parameters.
- ☐ Created unique in-house test fixtures and equipment when outside sources were not available.

June 1980 – Oct. 1986 **Massachusetts Institute of Technology, Lincoln
Laboratory** **Bedford, MA**

Staff Member, Analog Device Technology Group

- Development of signal processing algorithms, architectures and circuits for the application of advanced analog signal processing devices.
- Development of the most advanced SAW convolver based direct sequence spread spectrum (DSSS) packet radio data link reported at that date. This was part of the DARPA and CECOM Advanced Packet Radio programs.

- The radio supported up to 60 dB of signal-processing gain at 100 MHz signal bandwidth. It used spread spectrum for low probability of intercept, anti-jam communications. The receiver used a RAKE processor for multipath diversity and range measurement.
- Analyzed and simulated signal processing performance.
- Designed the analog and digital signal processing circuits and the real-time control logic.
- Trained and supervised a team of technicians in the construction and testing of ultrawideband and highly sensitive circuits.
- Designed and built numerous unique circuits for wideband communications, microprocessorbased highspeed control, and instrumentation.
- Reported on the team's work in technical journals and conferences, including an invited paper for the Proceedings of the IEEE.

Specific Notable Government-Funded Work

- MIT Lincoln Laboratory 1980-1986
 - Worked on various DARPA, ARMY and AIR FORCE programs.
 - Major program: 1980 – 1986 development of the Advanced Packet Radio for DARPA and the US Army CECOM under the Communication Network Technology program (clearance level: Secret)
- MICRILOR 1986 – 1998
 - Various Defense Contracts
 - Transform-based communications processor (Rome AFB)
 - High Rate Wireless Networking (CECOM) exploratory work
 - High Rate Wireless Networking (CECOM) Follow-on work to build a radio test-bed
 - Underwater Acoustic Spread Spectrum Communication System (Navy)
- Draper Laboratory 2010
 - Micro Digital Data Link for SUAS

Cooperative Work Study Experience

Summer 1979 Ampex Corporation Redwood City, CA
Spring 1978 Hewlett Packard Co. Rockaway, N.J.
Fall 1977 Hewlett Packard Co. Rockaway, N.J.

Jeffrey Fischer, "An In-Depth User's Guide to Selecting and Deploying Gen2 Tags, Readers, and Infrastructure", 2005 white paper available from many sources on the Internet

J. H. Fischer, K. R. Bennett, S. A. Reible, J. H. Cafarella, and I. Yao, "A High Data Rate, Underwater Acoustic Data-Communications Transceiver," Proc. of Mastering the Oceans Through Technology, (Oceans 92), Newport, Rhode Island, pp. 571-576, October 1992.

J. H. Fischer, J. H. Cafarella, C. A. Bouman, G. T. Flynn, V. Dolat, and R. Boisvert, "Wideband Packet Radio for Multipath Environments," IEEE Trans. Commun., vol. COM-36, pp. 564-576, May 1988.

J. H. Fischer, J. H. Cafarella, D. R. Arsenault, G. T. Flynn, and C. A. Bouman, "Wideband Packet Radio Technology," Proc. IEEE, vol. 75, pp. 100-115, January 1987.

J. H. Fischer, J. H. Cafarella, and G. T. Flynn, "SAW Convolvers and Signal Processing in a Packet Radio," Conf. Record IEEE MTT-S 1986, New York: IEEE, June 1986.

J. H. Fischer, J. H. Cafarella, G. T. Flynn, C. A. Bouman, D. R. Arsenault, J. D. Kurtz and R. R. Boisvert, "A Wideband Packet Radio Based on Hybrid Analog/Digital Signal Processing and Layered Architecture," MILCOM '85 Proc., Vol. S, The Electronic Battle: A New Era in Military Communications, New York: IEEE, October 1985.

J. H. Fischer, "Autocalibrating Circuitry for Processing SAW Convolver Outputs," in *1985 Ultrasonics Symp. Proc.* (New York, NY, IEEE), Oct. 1985.

J. H. Fischer, "SAW Devices for Spread Spectrum Communications," International Union of Radio Scientists, (Vancouver, B.C.), 1985.

Honors

1996 Mr. Fischer was elected Senior Member of the IEEE for technical contributions to the field of communications
